

Providing Better Healthcare Through Systems Engineering

Brainstorming ways to...
**coordinate medical care for older
adults, caregivers, and providers**

Grace Jenq, MD

Clinical Professor of Geriatric and Palliative Medicine, Michigan Medicine

Mon, Sep. 30
4:30-6 PM

As medical advancements extend our lifespans, including for those with chronic conditions requiring multiple specialty teams, the resulting fragmentation of care poses significant challenges for older adults, caregivers, and healthcare providers.

This seminar will explore strategies to improve care coordination for older adults with multimorbidities. Attendees will discuss how electronic medical records can help streamline and synchronize healthcare services, addressing the rising care complexities associated with polypharmacy and multiple specialists.

Join us in defining a more interconnected and effective healthcare system that better serves our aging population.
